Office Action Summary

Application No.

10/518,390

Applicant(s)

LOUVAIN ET AL.

Examiner

Marsha M. Tsay

Art Unit

1656

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 May 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3.9.10 and 18-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 3.9.10 and 18-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 December 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ ~~Notice of Informal Patent Application~~
- 6) ☐ Other: _____

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 14, 2010 has been entered.

Applicants' arguments have been fully considered and are deemed to be persuasive to overcome some of the rejections previously applied. Rejections and/or objections not reiterated from previous Office actions are hereby withdrawn.

Claims 1-2, 4-8, 11-17, 23-38 are canceled. Claims 3, 9-10, 18-22 are currently under examination.

Priority: The request for priority to FRANCE 0208299, filed July 3, 2002, is acknowledged. A certified copy of the foreign priority document has been filed in this case on December 30, 2004 and is in a non-English language.

The declaration under 37 CFR 1.132 filed May 14, 2010 is insufficient to overcome the rejection of claims 3, 9-10, 18-22 based upon Himmelspace et al. as set forth in the last Office action for the reasons noted below.

Objections and Rejections

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 18, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Himmelspace et al. (US 6573071; previously cited). For examination purposes, claim 3 has been interpreted as a Factor X analogue comprising the sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9). Therefore, any reference disclosing a Factor X analogue comprising at least instant SEQ ID NO: 9 is believed to be relevant art.

Himmelspace et al. disclose a Factor X analogue, having a modified processing site, comprising the sequence Gly228 to Ile235 having the sequence Gly228-R6-R5-R4-R3-R2-Arg234-R1 (col. 83, see also SEQ ID NO: 27), wherein

- a) R1 is an amino acid selected from the group consisting of Ile, Val, Ser, Thr, and **Ala**,
- b) R2 is an amino acid selected from the group consisting of **Pro**, Gly, Lys, and Arg,
- c) R3 is an amino acid selected from the group consisting of Phe, Lys, Met, Gln, Glu, Ser, **Val**, Arg, and Pro

Therefore, Himmelspace et al. disclose a Factor X analogue comprising the sequence Gly228-R6-R5-R4-**Val232-Pro233-Arg234-Ala235-Val236-Gly237**, wherein the amino acids in bold correspond to the instant thrombin-cleavable sequence Val-Pro-Arg-Ala-Val-Gly. Himmelspace et al. also disclose a preparation comprising said Factor X analogue having a processing site as noted by the sequence noted above, therefore said preparation would be a medicinal product (col. 84 lines 60-67). Himmelspace et al. do not explicitly teach a Factor X analogue comprising Val-Pro-Arg-Ala-Val-Gly (instant SEQ ID NO: 9).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to make a Factor X analogue, having a modified processing site, comprising Gly228-R6-R5-R4-**Val232-Pro233-Arg234-Ala235-Val236-Gly237**, wherein the amino acids in bold correspond to the instant sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9) (claims 3, 22). The motivation to do so is given by Himmelspace et al., which disclose Factor X analogues can comprise a modified processing site having an amino acid sequence formula that encompasses instant SEQ ID NO: 9.

While Himmelspace et al. do not specifically teach a Factor Xa analogue, this analogue is within the scope of Factor X analogues disclosed by Himmelspace et al. since upon cleavage of the Factor X analogue of Himmelspace et al. as noted in the paragraph above, one of ordinary skill would obtain a Factor Xa analogue since the Factor X analogue of Himmelspace et al. can comprise instant SEQ ID NO: 9 (claim 18). It should also be noted that the phrase "can be obtained by cleavage of a Factor X analogue by thrombin" is also describing a property of the factor X analogue which would be present as long as SEQ ID NO: 9 is encompassed within the Factor X analogue.

The reasons for maintaining the Himmelspace et al. reference are the same as previously noted and for the reasons noted below. Applicants' remarks received May 14, 2010, regarding the present invention's extraordinary and unexpected results will be addressed herein.

(1) In their remarks received November 10, 2009, Applicants assert the object of the present application is a factor X, initially with a native activation site, in which said activation site is mutated between the position 232 and 237.

Art Unit: 1656

The native sequence of the activation site of factor X comprises the sequence:

Gly₂₂₈-Asn₂₂₉-Asn₂₃₀-Asn₂₃₁-Leu₂₃₂-Thr₂₃₃-Arg₂₃₄-Ile₂₃₅-Val₂₃₆-Gly₂₃₇

The factor X according to the present invention is mutated so that the sequence Leu₂₃₂-Thr₂₃₃-Arg₂₃₄-Ile₂₃₅-Val₂₃₆-Gly₂₃₇ of the native activation site of factor X is replaced with the sequence Val₂₃₂-Pro₂₃₃-Arg₂₃₄-Ala₂₃₅-Val₂₃₆-Gly₂₃₇.

The factor X analogue of the present invention thus comprises, in its activation site, the sequence:

Gly₂₂₈-Asn₂₂₉-Asn₂₃₀-Asn₂₃₁-**Val₂₃₂-Pro₂₃₃-Arg₂₃₄-Ala₂₃₅-Val₂₃₆-Gly₂₃₇**

The Examiner alleges that Himmelspace et al. disclose a factor X analogue comprising the sequence:

Gly₂₂₈-**R₆₂₂₉**-R₅₂₃₀-R₄₂₃₁-Val₂₃₂-Pro₂₃₃-Arg₂₃₄-Ala₂₃₅-Val₂₃₆-Gly₂₃₇

According to Himmelspace et al., R₄ can be Asn, R₅ can be Asn, but Himmelspace et al. do not disclose the presence of Asn at position 229 (amino acid R₆).

(2) Himmelspace et al. fail to disclose or suggest a factor X analogue having the sequence Leu-Thr-Arg-Ile-Val-Gly (SEQ ID NO: 1) of the activation site of native factor X replaced with the sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9) with sufficient specificity and the artisan would have no reason to select this factor X analogue from the extensive list of alternative factor X analogues, much less an expectation of the beneficial results flowing from the same. Indeed, as stated above Himmelspace et al. merely disclose an extensive list of alternative factor X analogues and provides a generic disclosure, which can definitely not be considered as anticipating the very specific and particular combination of substituent which characterizes the analogue of factor X according to the present application.

(3) Applicants also assert that the present invention provides extraordinary and unexpected results, i.e. provides a high amidolytic activity, interacts with factor Va and activate prothrombin, has a higher half time than native activated factor X, has a procoagulant activity, and establishes an autoamplification of thrombin generation. Applicants submit the declaration under 37 CFR 1.132 by Dr. Bernard Le Bonniec for support. The skilled artisan would certainly appreciate that the efficiency of cleavage is conditioned by the nature of the amino acids framing the cleavage site of factor X, and more specifically by the residues P₃-P₂-P₁-P'₁-P'₂-P'₃ of the activation site, the cleavage occurring between the residues P₁ and P'₁. The residues P'₁ to P'₃ are thus involved in the catalytic activity of factor X after activation.

Applicant's arguments filed have been fully considered but they are not persuasive.

(1) Reply: It should be noted that the thrombin-cleavable sequence is the sequence Pro-Arg-Ala (specification p. 6 lines 14-17). Therefore, even if Himmelspace et al. do not teach Asn at position 229 (amino acid R6), the thrombin-cleavable sequence Pro-Arg-Ala is still present and would be cleaved by thrombin. It should be noted again, that Himmelspace et al. disclose that their factor X analogue is cleavable by factor IIa (i.e. thrombin), which is the serine protease recited in instant claim 18. Therefore, regardless of what the other amino acids are outside of the 6-mer sequence, Leu₂₃₂-Thr₂₃₃-Arg₂₃₄-Ile₂₃₅-Val₂₃₆-Gly₂₃₇ (instant SEQ ID NO: 1), since Himmelspace et al. disclose that the sequence can be replaced by Val₂₃₂-Pro₂₃₃-Arg₂₃₄-Ala₂₃₅-Val₂₃₆-Gly₂₃₇ (instant SEQ ID NO: 2), it would be reasonable for one of ordinary skill to know that the instant invention is within the scope of the Himmelspace et al. invention.

(2) Reply: Since Himmelspace et al. disclose a finite number of Factor X analogues that exhibit high stability and can be activated to factor Xa without using any of the conventional

proteases, it would be reasonable and obvious for one of ordinary skill to try and choose from the finite number of substitutions disclosed by Himmelspace et al. in order to arrive at a Factor X analogue comprising the sequence Val₂₃₂-Pro₂₃₃-Arg₂₃₄-Ala₂₃₅-Val₂₃₆-Gly₂₃₇ (instant SEQ ID NO: 2), which is cleavable by Factor IIa, since these components are disclosed by Himmelspace et al.

See also MPEP 2141.

(3) Reply: Regarding Applicants' unexpected results and the declaration under 37 CFR 1.132, it should be noted that the instant unexpected properties would be present in the factor X analogue of Himmelspace et al. even though Himmelspace et al. did not recognize the same properties because Himmelspace et al. disclose the instant thrombin-cleavable sequence, i.e. Pro-Arg-Ala, anyway. It should further be noted that it is not necessary in order to establish a *prima facie* case of obviousness . . . that there be a suggestion or expectation from the *prior art* that the claimed [invention] will have the same or a similar utility as *one newly discovered by applicant*,..." 919 F.2d at 693, 16 USPQ2d at 1901. See also MPEP 2144.

Further, the fact that Appellant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious." *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985). See also MPEP 2145.

See also the reply of (1).

Claims 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Himmelspace et al. (US 6573071; previously cited). The teachings of Himmelspace et al. are

outlined above. Himmelspach et al. further disclose nucleic acid molecules, expression vectors, and host cells that can be used to express the Factor X analogues disclosed by Himmelspach et al. (col. 17-28). Himmelspach et al. do not explicitly teach a nucleic acid molecule encoding the thrombin-cleavable sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to prepare a Factor X analogue having the thrombin-cleavable sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9) as disclosed by Himmelspach et al. by constructing expression plasmids for the preparation of Factor X analogue for expression in host cells (claims 19-21). The motivation to do so is given by Himmelspach et al., which disclose that Factor X analogues having the thrombin-cleavable sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9) can be prepared by constructing expression plasmids followed by transformation into a host cell for expressing a Factor X analogue protein.

The Himmelspach et al. reference is still maintained over claims 19-21 because it is believed to be relevant art for the reasons noted above.

Claims 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Himmelspach et al. (US 6573071; previously cited). The teachings of Himmelspach et al. are outlined above. Himmelspach et al. further disclose Factor X/Xa is an important component of the prothrombinase complex and may be used to treat patient suffering from blood coagulation disorders, i.e. hemophilia (col. 3-4). Himmelspach et al. do not explicitly teach a preparation

comprising a Factor X analogue with the thrombin-cleavable sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9) and a method of treating hemophilia utilizing said Factor X analogue.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to administer the Factor X analogue of Hammelspace et al. to a patient for the treatment of hemophilia because Hammelspace et al. disclose Factor X/Xa which exhibits high stability and can be activated to Factor Xa without use of conventional proteases (col. 4 lines 30-35), i.e. modified to have the thrombin-cleavable sequence Val-Pro-Arg-Ala-Val-Gly (SEQ ID NO: 9), can be administered to treat patients suffering from hemophilia (claims 9-10).

The Hammelspace et al. reference is still maintained over claims 9-10 because it is believed to be relevant art for the reasons noted above.

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marsha M. Tsay whose telephone number is (571)272-2938. The examiner can normally be reached on M-F, 9:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Manjunath N. Rao can be reached on 571-272-0939. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
